# **GALLERY APP**

## **INTRODUCTION**

**Gallery app** is a photo viewing android application with basic functionalities like viewing an image, deleting, sharing and getting image details.

Apart from image viewing, this app supports it's users to hide/protect images. A user can hide images by setting a 4-digits PIN. Only who have the PIN can view and manage the hidden images.

## **MOTIVATION**

Most of the stock android mobile phones (near to stock) like Motorola, Lenovo don't have separate gallery applications to view photos which are locally stored. One has to view by camera app which don't show other album images except the images which are here are taken by camera. Also people may have some private images which should not be shown others. In order to solve these problems we are developing this application.

## **OBJECTIVES**

Through our application an android user can be able to view images of local storage in both list view and full size view and can modify images. One can hide images by setting a 4 digit PIN. It also asks a security question while setting PIN. It will help user to recover the PIN if in case he forgot the PIN. Application will have a simple and clean User Interface thus any one can easily use application.

## **CONCLUSION**

Our application is working as expected. All the features are working fine as per the wireframe. We mainly concentrated towards working of the functionalities hence there is little poor user interface and definitely we will improve it in upcoming versions or release. Any android user can make use of our application for photo viewing and photo hiding.

## **FUTURE ENHANCEMENTS**

- Improvement in code to minimize the delays.
- Zoom in and Zoom out feature to Images.
- Horizontal view support.
- Themes and UI improvements.
- Image Crop, Color filter feature.
- Image slide show.
